

MADE FROM BRITISH MILK

Multistart

Calf milk replacer

CalfStart Multistart is formulated to achieve the growth rates needed for high performance dairy and beef calves.

Usage

Designed for use as a complete replacement for cow's milk.

CalfStart Multistart is ideal for once and twice a day feeding, and is suitable for use in buckets and cold ad-lib feeding systems. The product mixes instantly with cold or warm water and is also suitable for use in some computerised calf feeders and automatic feeders requiring an instant milk powder.

Key Benefits

- Made with British milk
- Highly digestible
- Suitable for dairy or beef calves
- 22% protein level

Analytical Constituents

Oil	17%
Protein	22%
Ash	7.5%
Selenium	0.4 mg/kg
Copper	10mg/kg
Fibre	Nil
Vitamin A	25,000 iu/kg
Vitamin D3	10,000 iu/kg
Vitamin E	500 iu/kg

Bucket Feeding

- **Mixing Rate:** 125g of milk replacer mixed with water to make up to 1 litre of mixed milk (12.5% solids). Calves under 28 days of age should be fed a minimum of 4 litres per day split into 2 feeds.
- CalfStart Multistart can be used in a once a day feeding system from 28 days of age providing that the calves are consuming enough solid feed to constitute a second feed. For once a day feeding increase the concentration to 200g per litre from 28 days and reduce the volume to one 3 litre feed. For once a day feeding with whole milk add 50g of powder per litre.

For advice on feeding CalfStart Multistart once a day please contact Mole Valley Farmers directly.

Calf Management

- Do not feed at a temperature over 37°C.
- Colostrum management is crucial. Colostrum should be fed as soon as possible.

- Give concentrate from day 1 onwards, give in small amounts and no more than is consumed.
- Renew the feed regularly, calves can be weaned when they eat >1.5kg of concentrate per day.
- Supply roughage in the form of chopped straw.
- Ensure that calves have enough fresh drinking water at their disposal from 1 day of age.

Twice a day bucket feeding (125g per litre of mixed milk)

	Morning Feed litres per calf	Afternoon Feed litres per calf
Day 1-3	Colostrum: minimum 3 litres in first 6 hours, then give at least 2 litres/feed, twice a day	
Day 4-7	2.5	2.5
Day 8-35	3	3
Day 36-49	2.5	2.5
Day 50-56	2.5	

Machine Feeding

- CalfStart Multistart is suitable for use in most computerised and ad-lib feeders requiring an instant type milk replacer.
- Calibrate the feeder so that milk is reconstituted at 12.5% solids and keep at this concentration throughout the rearing period.

Packaging

60 x 20kg bags.
